SIDE 1

SIDE 2

Thermo Solution Lumber has a high dimensional uniformity as well as thermal modification produced in a controlled oxygen environment between 160 °C and 230 °C, generating properties and advantages such as:

- Improved durability and resistance to wood's natural decay.
- Reduced thermal conductivity.
- Resin-free.
- Improved surface hardness.
- Reduced moisture content.
- Color consistency throughout and inside the piece.
- Improved dimensional stability.
- Environmentally friendly, as it does not require chemical layer adhesion.

MAIN USES

- Decking
- Furniture
- Veneers
